**Subject:** Water Quality Standards Rule Discussion Draft

Jeff,

The attached discussion draft represents where we are at currently on the lake nutrient criteria. It differs in several respects from the most recent draft that you have been reviewing. First the drinking water use criterion and screening levels have been removed. Second, the eutrophication impacts for assessing the drinking water use have been removed. Third, the aquatic life criteria for the Plains Region is 40 ug/L Chlorophyll-a. It is the same in all other respects, however a markup version is provided for your convenience. I look forward to discussion with you on Friday.

Please feel free to contact me if you have any questions or comments.

Ed Galbraith

Director, Division of Environmental Quality

Missouri Department of Natural Resources
